CLICKS CONSULTANCY

The Center for Learning Innovations and Customized Knowledge Solutions (CLICKS) has been, over the past seven years, working closely with Higher Education Institutions from across the region and beyond in developing institutional capabilities, and promoting a culture of quality and excellence across all core areas of the higher education sector. We help institutions achieve their goals and increase their effectiveness and efficiency by offering a broad range of tailored and 'fit for purpose' consultancy services, which meet the specific needs and context of Universities and Colleges.

We specialize in leadership development and governance, teaching and learning including aspects of technology integration in Higher Education, strategy development, quality assurance and accreditation, and research.

In providing our various services, we draw upon the experience we have gained working with more than 90 institutions of learning across the region, our dedicated internal team capabilities, our vast network of experienced associates, and our various established international partnerships.

OUR CAPABILITIES

DEEP EXPERTISE IN THE SECTOR

Being informed about latest developments and research in the field, new technology trends, education reforms and policies, emerging business models, and the HE ecosystem as a whole is a fundamental requirement to support the Higher Education sector in an ever-changing and dynamic global economy. This is why CLICKS's team and associates, despite bringing with them decades of experience, continuously strive to remain at the forefront of any new development happening in the sector.

WORK THROUGH STRATEGIC PARTNERSHIPS

CLICKS adopts a client-centric, hands-on, collaborative, and interactive approach which is focused on a deep understanding of its client institutions and an emphasis on developing solutions alongside the institution to ensure 'fitness for purpose', value, and long-term success. We are keen on offering customized solutions that are not just theoretical, but workable and appropriate to the context and particularities of each institution.

ADOPT AN EVIDENCE-BASED APPROACH

The methodology adopted by CLICKS to work with its client institutions relies on a comprehensive assessment approach of the current situation of the client institution rather than on assumptions.

Our recommendations are accordingly based on rigorous analysis and assessment, in-depth research, and benchmarking. This helps the Center identify current practices within the institution, determine those that are good to build upon, and identify any gaps, problems, or areas for improvement. We are keen to maintain an active dialogue to discuss potential solutions openly with the client institutions.

BUILD INTERNAL CAPABILITIES TO CREATE TANGIBLE & SUSTAINABLE IMPACT

Building institutional internal capabilities is what bridges the gap between "great on paper" and being "great in reality"; this is why CLICKS has rooted within its core values, the importance of building capability and transferring 'know-how' through its engagement with Higher Education Institutions from across the globe.

COMMITTED TO QUALITY

CLICKS is fully committed to deliver high-quality services and products. All experts involved in the delivery of our services are required to work within the Center's quality framework, and are trained and mentored through an orientation program to keep them well informed about both our policies and the Higher Education context within regions and countries where the Center operates.

Most of our work primarily comes from client referrals and ongoing partnerships with our clients, which is something we are proud of and that we see as an outcome of quality services.

BRINGING IN INTERNATIONAL PERSPECTIVES WITH REGIONAL CONSIDERATION

Our global and regional experience and network enable us to bring best practices from across the globe while considering the local nature

and context of particular institutions. Beyond CLICKS's own internal capabilities, the Center works in partnership with several international organizations and institutions (i.e. the QAA in the UK, the European Center for Benchmarking, The European QA Agency, the University of Texas at Austin, the New Zealand Curriculum Institute and Advance HE in the UK among others), as well as with an impressive pool of international experts and advisors that bring along accumulated, extensive, and profound knowledge and experience from different parts of the world.
